Dear Hiring Manager,

I'm a Senior Software Engineer with 7+ years of experience designing and shipping backend systems, primarily in Java / Spring Boot, with hands-on delivery of production PHP / Laravel applications alongside it. I'm writing to express my interest in joining your team and to share a bit about how I work.

At Exabyting, I work as an augmented resource on bKash Limited's core payment platform — Bangladesh's #1 Unicorn mobile financial service — designing microservices and REST APIs that handle 2.5M+ daily transactions, optimizing database queries and Redis caching for a 40% response-time improvement, and leading a Spring Boot 2→3 migration across production services with zero disruption to live transaction volume. Earlier, at SELISE, I extended ThingsBoard, an open-source IoT platform, into a multi-tenant middleware handling millions of data points for a Swiss enterprise client — that contribution was merged upstream into the ThingsBoard project itself. Alongside this Java-centric career, I've delivered Laravel projects end-to-end for government and private company clients: CMS-driven websites, accounting portals, and modular RBAC systems, and I author and maintain an open-source Laravel package, `laravel-gitstamp`.

A few other wins I'm proud of at bKash Limited: cutting API latency by migrating client-facing endpoints from REST to GraphQL, speeding up CI/CD builds by ~42% (8m 29s → 4m 56s) through multithreaded pipeline execution, and building a live log-streaming pipeline from AWS EC2 to developers' machines that saves the team real debugging time.

Outside of client work, I build and ship things I actually use: a RAG pipeline over S3 documents, a cross-platform encrypted backup daemon sold as a freemium product, an npm chat-widget package that currently powers the AI assistant on my own portfolio site, and `jmbus`, a Java M-Bus protocol library grown out of my IoT work at SELISE. I care about finishing what I start and about code that holds up once real users depend on it, whether that's a Spring Boot microservice or a Laravel admin panel.

I'd welcome the chance to discuss how my background could contribute to your team. Thank you for your time and consideration.

Sincerely,
Towfiqul Islam
