Professional Summary

Senior Software Engineer with 7+ years of professional experience across Java/Spring Boot, PHP/Laravel, and Python, who over the past few months has been building full-stack in Go and React: a 9-service Go microservices backend and its companion React (Vite/TypeScript) admin portal for a multi-tenant SaaS platform, developed end-to-end in an AI-native workflow using Claude Code as a daily coding agent. Comfortable designing service boundaries and gRPC/REST APIs in Go and building the React frontend that consumes them, backed by a production engineering career — distributed systems, Kafka, observability, CI/CD — from Java/Spring Boot fintech microservices at bKash Limited.

Go & React Highlights

- Designed and built a 9-service Go microservices backend (identity, tenant, transport, booking, payment, notification, tracking, reporting, gateway) for a multi-tenant school-transport SaaS platform — gRPC internal APIs via buf-managed protobuf contracts, a REST gateway on Gin, Kafka/Redpanda domain events, PostgreSQL per-service schemas, Redis-backed rate limiting, and MinIO object storage
- Built the platform's React (Vite + TypeScript + Tailwind) admin portal end-to-end — role-based navigation for Super Admin/Company Admin/School Admin/Transport Manager, live GPS fleet tracking over SSE, and reporting dashboards with charts and CSV export, consuming the Go backend directly
- Took the platform from an empty repo to a fully tested, deployable multi-tenant SaaS (Go backend + React portal + 3 Flutter Android apps) in about a month, running an AI-native workflow with Claude Code as a daily coding agent across planning, implementation, and review
- Hardened the Gin gateway with a Redis-backed fixed-window rate limiter (shared across replicas, fails open) and explicit trusted-proxy configuration; reached go test/go vet clean across all 10 Go modules plus a 98-check end-to-end smoke test
- Shipped Docker Compose local infra (Postgres, Redis, MinIO, Redpanda) and a GitHub Actions → DigitalOcean App Platform CI/CD pipeline with per-service Dockerfiles
- Built VaultAGramBot, a Go + Gin + PostgreSQL Telegram bot in active development since May 2026, and vaultbackup, a Go CLI with MySQL/MongoDB/filesystem backup connectors

Core Expertise

- **Backend (Go):** Go, Gin, gRPC, Protocol Buffers (buf), goroutines & channels, context, microservices, multi-tenant SaaS design, REST APIs
- **Backend (cross-stack, 7+ years professional):** Java (11–21) / Spring Boot, PHP / Laravel
- **Frontend:** React, TypeScript, Vite, Tailwind CSS
- **Databases:** PostgreSQL, Redis, MongoDB, MySQL, DynamoDB, Cassandra
- **Messaging & Events:** Kafka, Redpanda, RabbitMQ, ActiveMQ
- **Cloud & DevOps:** Docker, Docker Compose, GitHub Actions CI/CD, DigitalOcean App Platform, AWS, Kubernetes
- **AI-Assisted Development:** Claude Code (daily driver), agentic/multi-agent coding workflows, LLM integration (RAG pipelines, AI chat widgets)
- **Practices:** API & service-boundary design, observability, testing (go test/vet, JUnit), Agile/Scrum, code review

Professional Experience

Note: the roles below were delivered primarily in Java/Spring Boot; Go and React full-stack work is demonstrated through the self-directed platform and tooling projects listed separately below.

Senior Software Engineer – Exabyting

April 2024 – August 2026 | Dhaka, Bangladesh

Augmented resource at bKash Limited. Built and maintained core backend services (Customer App MW, FinRec, PIN Reset MW) on Java / Spring Boot, DynamoDB, and Kafka, processing 2.5M+ transactions daily.

Software Engineer – SELISE

November 2021 – April 2024 | Zurich, Switzerland (Remote)

Extended ThingsBoard into a multi-tenant IoT middleware platform for a Swiss enterprise customer, modeling and optimizing time-series telemetry at a scale of millions of data points.

Software Engineer – Exabyting

December 2019 – November 2021 | Dhaka, Bangladesh

Developed government and private web applications and services. Worked as partner team with bKash Limited's Solution Engineering Team.

Key Go & React Projects

- **School Transport Management Platform** – Multi-tenant SaaS; Go microservices (gRPC, Gin REST gateway), Kafka/Redpanda, PostgreSQL, Redis, MinIO; React (Vite/TS/Tailwind) admin portal; 3 Flutter Android apps; Docker Compose, GitHub Actions CI/CD, DigitalOcean
- **VaultAGramBot** – Go + Gin + PostgreSQL Telegram bot, Dockerized, in active development
- **vaultbackup** – Go CLI backup utility with MySQL/MongoDB/filesystem connectors
- **Aerotia International** – Laravel 12 (PHP 8.2) JSON API + Blade admin CMS, React 18/TypeScript frontend
- **bKash App** – Java 11–21 / Spring Boot (WebFlux) microservices, DynamoDB, Kafka, gRPC, Kubernetes — distributed-systems background carried into the Go platform's service design
- **chatling** – Framework-agnostic AI chat widget (npm) that integrates LLM completions into this portfolio's own assistant

Key Impacts

- **School Transport Platform:** solo-designed and delivered a 9-service Go/gRPC backend plus its React admin portal and 3 Flutter apps in about a month, end to end — schema design through CI/CD-ready Dockerfiles — running an AI-native, agent-driven SDLC the whole way
- **Gin gateway:** implemented a Redis-backed rate limiter and explicit trusted-proxy configuration, closing an unsafe-by-default gap in Gin's proxy-trust handling
- **bKash App:** built and maintained services processing 2.5M+ transactions/day (Java/Spring Boot)
- **Reactive Kafka:** implemented reactive Kafka integration (spring-kafka, reactor-kafka) to improve throughput and resilience across core banking microservices — the same event-driven instincts applied to the Go platform's Kafka/Redpanda domain events

Education

B.Sc. in Computer Science & Engineering – International Islamic University Chittagong (2014 - 2019)

Certifications & Awards

- Java (Intermediate), C++ (Advanced), Python (Basic) – HackerRank
- IIUC IUPC 2017 – 2nd Position (Coach)
- EDU Programming Contest 2018 – 5th Position (Coach)
- CSE Week Programming Contest 2016 – 5th Position
- Solved 500+ competitive programming problems

Open Source Contributions

- **claude-auto-resume-command** – Author & Maintainer; Claude Code /auto-resume slash command plus a Stop-hook-based session guardian that auto-resumes paused sessions
- **chatling** – Framework-agnostic AI chat widget (npm), powers this portfolio's own AI assistant
- **ThingsBoard** (Java, open-source IoT platform) – Pull Request #6614 (Merged)
- **laravel-gitstamp** (PHP/Laravel) – Author & Maintainer, MIT-licensed, CI-tested across Laravel 10–12
